Doctiling

Turn your documents into an expert you can talk to.

The document-intelligence platform that answers with verifiable citations, runs on any AI model — in the cloud or 100% local — and finally makes adopting AI safe, affordable, and under your control.

OUR VISION

Let any team talk to its own knowledge — without giving up data, model, or budget.

Upload PDFs, databases, web pages, or scanned images. Doctiling turns them into a space an agent can query — one that answers, analyzes, and **cites the source** — from the browser, mobile, or a box on your own network.

INGESTION

Every format

PDF geometry, tables, external SQL databases, URLs, and images via OCR.

GROUNDING

Cited answers

Every claim points to its source passage. No fabrication.

AGNOSTIC

Any model

Cloud, offline, or at the edge. The AI provider is swappable.

SOVEREIGNTY

Your data, your network

Local tier: information never leaves your infrastructure.

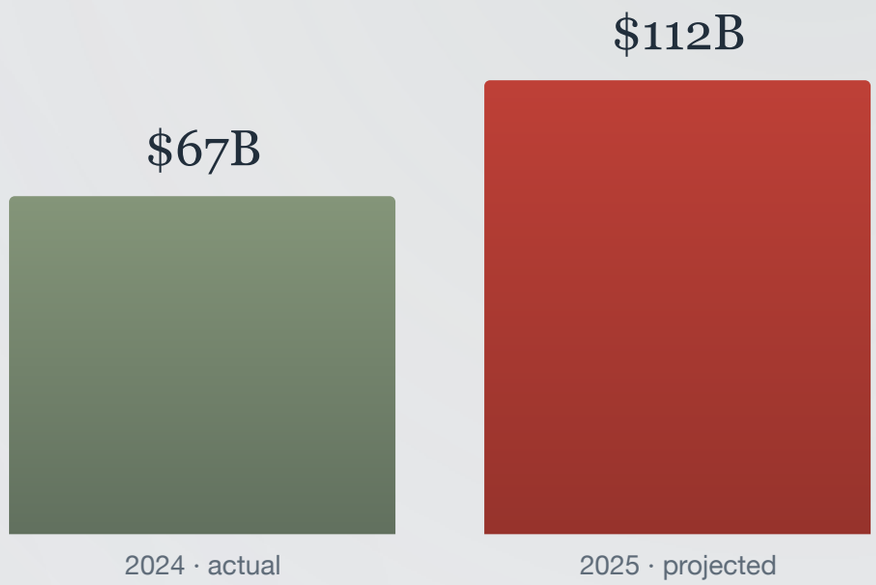

THE PROBLEM

The knowledge exists. Finding it and trusting it doesn't.

Teams lose a quarter of their day searching for information, and the generic AI that promised to fix it never reaches production: it hallucinates and exposes sensitive data.

- Knowledge workers spend **~1.8 h/day** (≈25% of the workday) searching for information. — McKinsey
- Only **10%** of generative-AI solutions reach production; hallucination is the main barrier. — Gartner
- Hallucinations cost **US$67.4 B** in 2024, projected at **US$112 B** in 2025. — AllAboutAI

GLOBAL COST OF AI HALLUCINATIONS

The gap isn't access to the model — it's **trust**: without a verifiable source, AI won't enter serious workflows.

AI ADOPTION · THE ENABLER

80% of companies already explore AI. The barriers holding them back are exactly the ones Doctiling removes.

ADOPTION BARRIER (2025–2026)	THE BLOCKER	HOW DOCTILING SOLVES IT
Data privacy	**76%** cite it as their #1 AI risk	100% local / self-hosted tier: data never leaves your network.
Hallucination & reliability	**60%** report it as a barrier	Answers grounded in sources, with the citation beside them (RAG).
Complexity & integration	**64%** struggle with legacy systems	Ingests PDF, SQL, URL, and images; deploy in the cloud or in a box.
Cost & vendor lock-in	Uncapped per-seat licenses	Swappable provider + per-user credit cap.

Doctiling isn't one more AI app: it's the **layer that makes AI adoptable** in organizations that can't give up data or budget. Sources: enterprise adoption surveys 2025–2026 (privacy, reliability, integration).

THE SOLUTION

AI anchored to your documents, with the citation right beside it.

An agent that retrieves the exact passage before answering, shows where it came from, and runs on the AI provider you choose — even 100% offline for sensitive data.

ANTI-HALLUCINATION

Retrieve, then answer

Semantic chunking + native vector search. The answer is built on evidence, not the model's memory.

PRIVACY

Offline tier

Local model and embeddings. Data never leaves. Fits GDPR/HIPAA demands.

WHITE-LABEL

No lock-in

Swap the AI engine without touching the product. Vendor-neutral.

REAL WORK

Knowledge bases + skills

Domain spaces with agents, tools, and saveable analysis variants.

HOW IT WORKS

From raw file to cited answer, in four steps.

01 · INGEST

Load

PDF, SQL DB, URL, or image. Geometry extraction preserves tables and reading order; OCR for scans.

02 · INDEX

Understand

The engine analyzes the document and picks the chunking strategy; 768-dim embeddings in native vector search.

03 · QUERY

Ask

The agent retrieves what's relevant and answers. Modes: analyze, synthesize, converse. Tools per knowledge base.

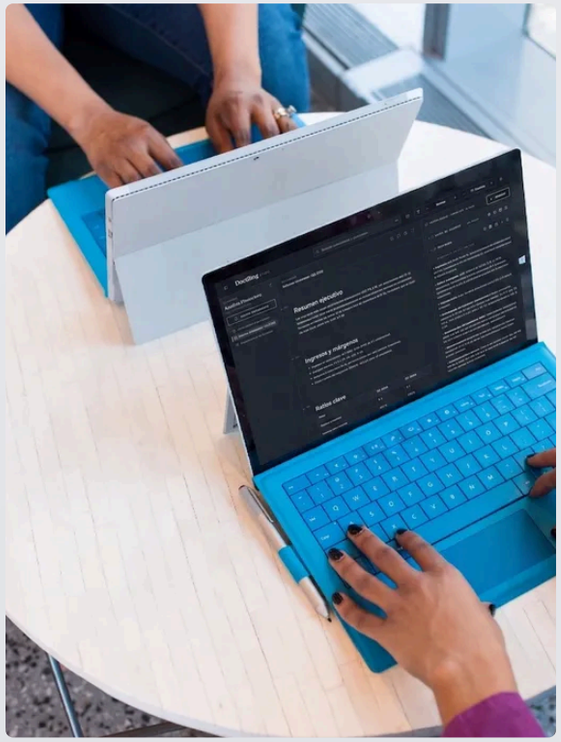

04 · ACT

Cite & create

Sourced answer. Save variants, share knowledge bases, and query from mobile via MCP.

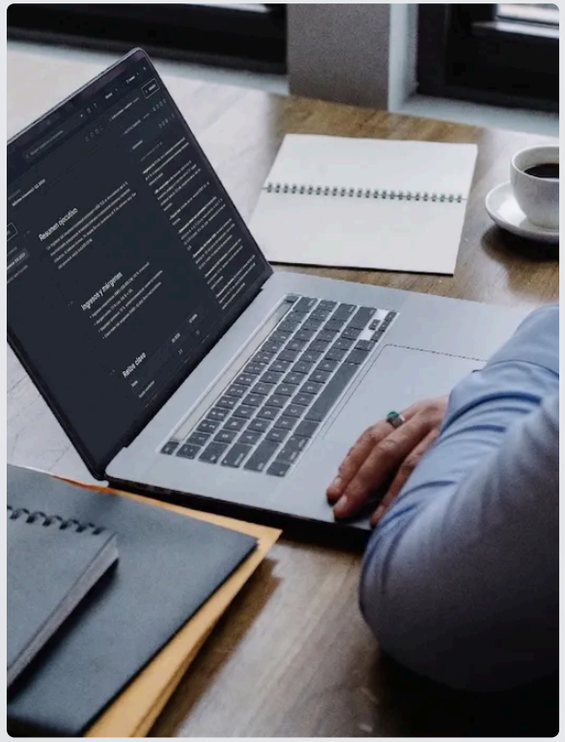

Prompt caching, effort routing, and a per-user credit cap keep AI cost under control — a product priority.

From the office desk to the student's bed — the same knowledge, cited.

COLLABORATION

Analyze as a team, on the fly.

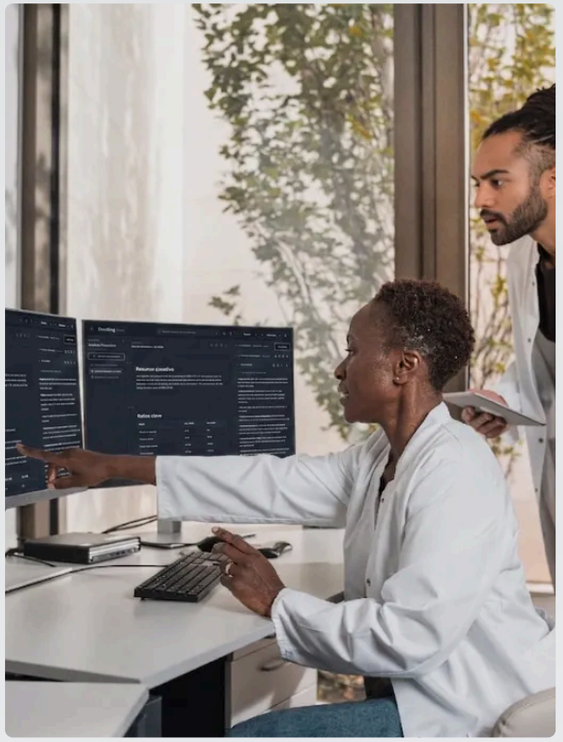

FOCUS

From document to decision.

STUDY

Anywhere, anytime.

DEMANDING SECTORS

Health, finance, and legal.

Real product captures in use: a cited agent, available where the work happens — cloud, desktop, or mobile.

COLLABORATION · LIVING DOCUMENT

Not a throwaway chat. A living document — editable, versioned, and shared.

COLLABORATION

One space, the whole team

Share knowledge bases with **admin, collaborator, or reader** roles. Private or shared analyses per user, and comments on every block.

EDITABLE DOCUMENT

Block editor

Text, tables, code, diagrams, lists, and quotes. Notion-style «+» menu; even databases that live as another document.

RECOVERABLE

Version control

Per-block history and **saveable variants** of every analysis: nothing is lost, everything reverts and compares.

EXTENSIBLE

Your own tools and skills

Build tools without code: **webhook, prompt (skill), knowledge-base-RAG, SQL database, and URL resource**. Enable them per knowledge base.

Knowledge isn't just queried: it's edited, versioned, commented, and extended with tools the team itself defines.

VERTICALS · OUT OF THE BOX

Pick your specialty and your space builds itself — assistant, skills, templates, and database.

🩺

Health / Clinical

SOAP notes, differentials, medication reconciliation, labs.

⚖️

Legal

Clause review, obligations & deadlines, risk, IRAC memos.

📈

Financial

Ratios, filing summaries, DCF valuation, variances.

🧮

Accounting

Classify transactions, journal entries, reconciliation, close.

🎓

Study

Summaries, guides, flashcards, and practice on your material.

🔬

Research

Literature review, synthesis, and findings extraction.

💼

Consulting

Diagnosis, frameworks, deliverables, and per-client bases.

👥

HR

Policies, job descriptions, evaluation, and onboarding.

Each template provisions a knowledge base with an expert system prompt, its own set of **skills**, guide documents, and databases — in English and Spanish. Natural base: our origin in a master's program (Univalle) validates research and education.

Similar tools — and the gap none of them covers.

AI KNOWLEDGE BASE

NotebookLM

Grounding with citations, but **cloud only**, a single model (Google), no self-hosting or SQL databases.

ENTERPRISE SEARCH

Glean

Powerful, but **~US$1 M/yr** at 1,500 seats + implementation; no offline or edge.

PRODUCTIVITY SUITE

Microsoft 365 Copilot

Tied to the Microsoft ecosystem; **no model choice**, no real on-prem.

GENERAL ASSISTANT

ChatGPT Enterprise

A single provider, cloud only, **~US$60/user** and a ~US$108 K/yr minimum.

WEB SEARCH

Perplexity Enterprise

Shines on the public web, not your private corpus; no local tier.

KNOWLEDGE BASE

Guru · Notion AI

Shallow RAG, **no model choice**, no offline or edge.

Each one does a part. None combines **verifiable citations + swappable model + local/edge deployment + cost under control.** That's the Doctiling gap.

COMPETITIVE ADVANTAGE

What other apps don't do — and Doctiling does.

CAPABILITY	DOCTILING	NOTEBOOKLM	GLEAN	M365 COPILOT	CHATGPT ENT.	GURU / NOTION
Verifiable cited answers	Yes	Yes	Yes	Partial	Partial	Partial
Swappable AI provider	Yes	No	No	No	No	No
100% offline / self-hosted tier	Yes	No	No	No	No	No
Local AI at the edge (Jetson)	Yes	No	No	No	No	No
Editable document + version control	Yes	No	Partial	Partial	No	Yes
Own tools and skills (no code)	Yes	No	Partial	Partial	Partial	No
External SQL databases as a source	Yes	No	Partial	No	No	No
Per-user cost control	Yes	n/a	No	No	No	No

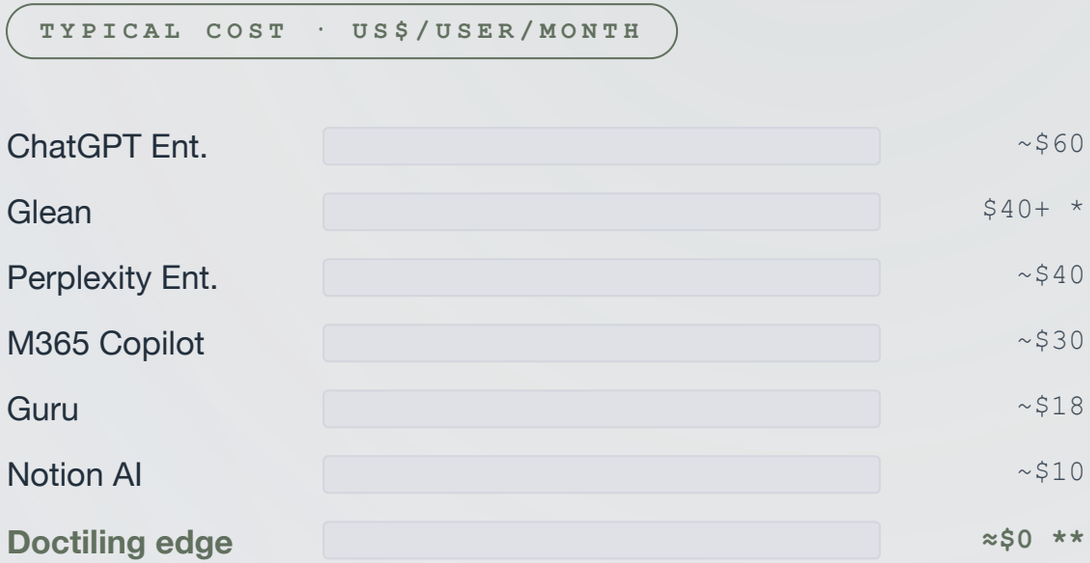

The wedge: the others give you answers **or** control, rarely both. Doctiling delivers cited grounding **and** sovereignty over model, data, and cost.

COMPETITIVE COST

The others charge per seat, forever. Doctiling lets you fix the cost.

In the cloud we're competitive per seat. But at the edge the model changes: **hardware once**, unlimited queries, zero token bill, and zero data leakage.

- **No 100-seat minimums** or US$20–80 K implementation fees.
- **No token bleed:** the credit cap protects the budget.
- **Edge option:** a **~US$599** box serves a whole team, forever.

* Glean: custom quote, ~100-seat minimum + US$20–80 K implementation.
** Edge: marginal per-user cost after one-time ~US$599 hardware; no token bill.

FLEXIBILITY

One product. Four ways to deploy it — you choose where your data lives.

CLOUD

Managed SaaS

Start in minutes. Fast / balanced / deep model tiers.

PRIVATE

Self-hosted

On your own infrastructure with the same database and native vectors.

OFFLINE

Air-gapped

Local model and embeddings. Zero outbound connection for regulated data.

EDGE

On your local network

AI running on an NVIDIA Jetson box inside your physical network.

MODEL

Swappable

Change the AI engine without migrating product or data. No vendor lock-in.

SOURCES

Any origin

PDF, images, URLs, and external SQL databases coexist in one space.

DATA

One same database

From local **file:** to a managed remote database: same app, different topology.

Your AI in a palm-sized box. No cloud, no leakage, no token bill.

NVIDIA JETSON ORIN NX · 16 GB

~$599

Gemma 12B · deep local model

AI compute	**100 / 157 TOPS**
Memory	**16 GB LPDDR5**
Bandwidth	**102 GB/s**
Usable context	**~100K tokens**
Power	**10–40 W**
Use	**Teams & analysis**

NVIDIA JETSON ORIN NX · 8 GB

~$399

Gemma 4B · agile local model

AI compute	**70 / 117 TOPS**
Memory	**8 GB LPDDR5**
Bandwidth	**68 GB/s**
Speed	**~17–25 tok/s**
Power	**10–40 W**
Use	**Branch / kiosk**

97% of CIOs already have edge AI deployed or on their roadmap; **2026 is the year of sovereign AI**, and data localization is now the #1 trigger for on-premise deployment. Doctiling runs natively on Jetson: query your knowledge without a single byte leaving the network. Sources: NVIDIA / ThinkRobotics (specs), CIO edge AI survey 2025.

MARKET OPPORTUNITY · 2026

Four waves converging on the same product.

INTELLIGENT DOCUMENT PROCESSING

US$91.0 B

by 2034 · from **$14.2 B** (2026) · **26.2%** CAGR

The parent market: turning documents into actionable data.

RAG · RETRIEVAL-AUGMENTED GENERATION

US$9.9 B

by 2030 · from **$1.9 B** (2025) · **38.4%** CAGR

Exactly our category: answers anchored to sources.

EDGE AI

US$118.7 B

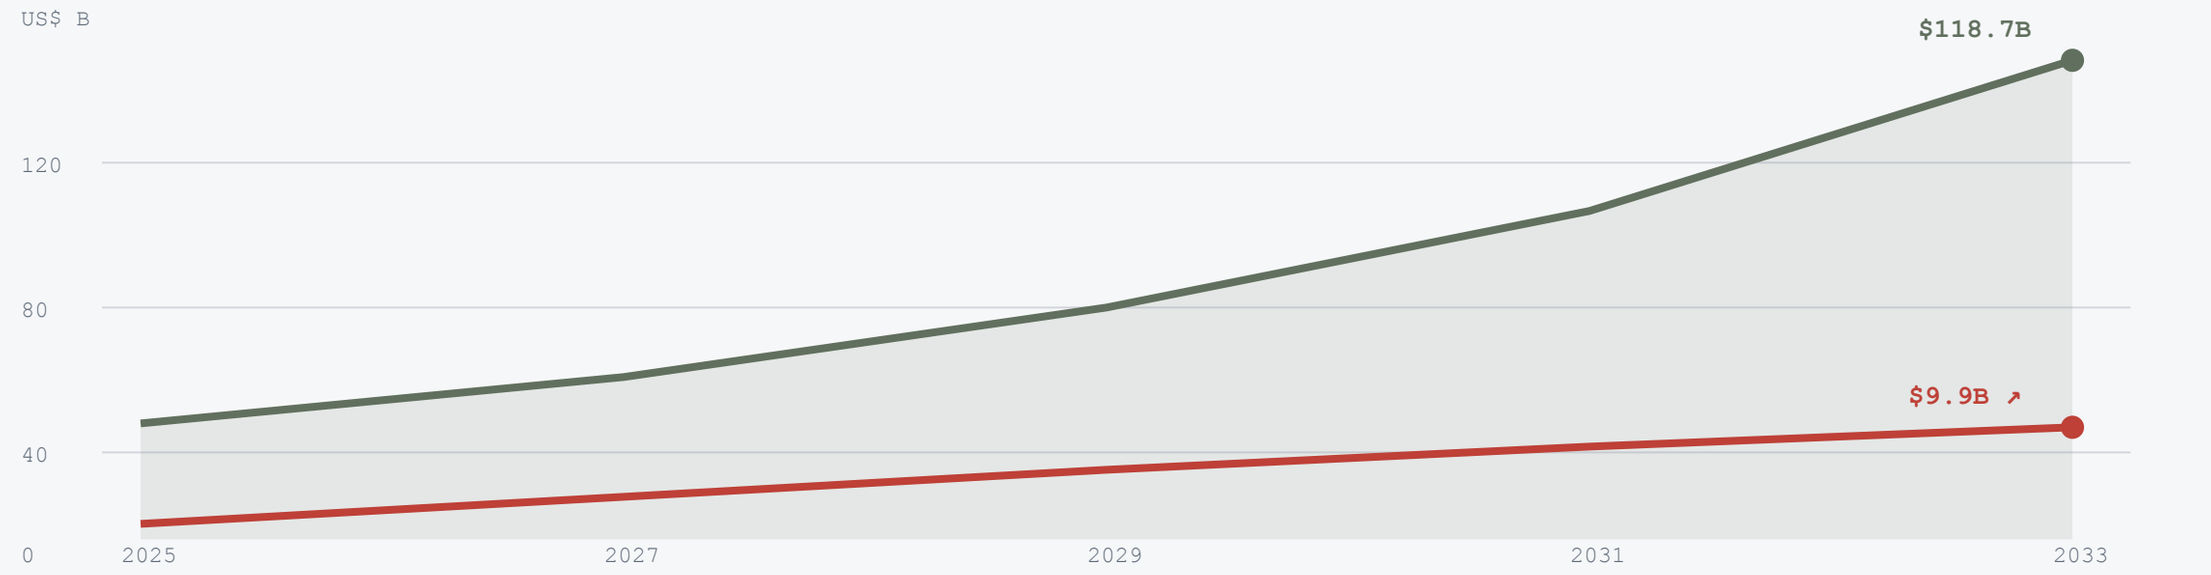

by 2033 · from **$30.0 B** (2026) · **21.7%** CAGR

Our differentiator: local AI with data sovereignty.

2026 signals: vector databases grew **+377% year-over-year** · **70%** of generative-AI users already use retrieval (RAG) · Gartner: 65% of governments will require technological sovereignty by 2028. Sources: Fortune Business Insights (IDP) · MarketsandMarkets / Mordor (RAG) · Grand View / Precedence (Edge AI) · Databricks State of AI.

TREND

The two markets we play in grow faster than the average.

Enterprise generative AI: **+36% CAGR** (2025–2029). Doctiling rides both curves — cited RAG, deployable at the edge (Edge AI).

BUSINESS MODEL

Per-seat SaaS, with capacity tiers and a local-deployment license.

ESSENTIAL · FAST

Small teams

Fast tier, knowledge bases, and cited RAG. AI credit included per seat.

PRO · BALANCED

Departments & projects

Per-knowledge base tools, skills, SQL DB, and analysis variants.

DEEP · DEEP

Heavy use

Deep tier for complex analysis, more credit and priority.

ENTERPRISE · EDGE

Local / Jetson

Self-host / offline / edge license. On-prem data, priced per deployment.

RECURRING REVENUE

Per-seat subscription

Predictable base; the AI credit controls gross margin.

EXPANSION

Consumption + hardware

Extra credits in the cloud; Jetson appliances at the edge.

ENTERPRISE

License + support

Annual local-deployment contract for regulated sectors.

GO-TO-MARKET

Enter through the verticals where citation and privacy are mandatory.

Health, legal, and the public sector share one pain: they can't give up data or tolerate answers without a source. There, the out-of-the-box templates and the local tier are the closing argument.

PHASE 1 · TODAY

Invitation

Sponsored beta with design partners in regulated verticals; cases and learning.

PHASE 2

Self-serve

Onboarding with per-specialty templates; bottom-up growth inside the org.

PHASE 3

Enterprise + edge

Direct sales of self-host and Jetson appliances to regulated and public sectors.

Motion: marketing by vertical → sales team + partners → customer success (retention and expansion by consumption and hardware).

THE ASK

We're seeking capital and partners to go from beta to market.

With a working, invitation-only product, the investment converts design partners into paying accounts and hardens the enterprise and edge tiers.

- **Grow sales & marketing** — a per-vertical acquisition engine.
- **Harden enterprise & edge** — self-host, SSO, audit, Jetson appliance.
- **Continuous improvement** — extraction, retrieval, and collaboration quality.
- **Launch the MCP mobile app** — knowledge in your pocket.
- **Expand support & customer success** — retention and expansion.

Let's talk to your documents.

Thanks for your time. Book a demo of the cited agent, the collaborative living document, and local AI at the edge.

doctiling.app Demo by invitation Confidential · 2026
